

Intelligent Sensing Anywhere

Telemetry Solution for Lubricants

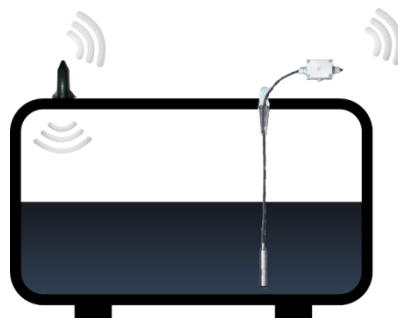

Benefits:

- Optimized management of tanks with new and used lubricant
- Up to 27 tanks monitored
- Easy installation
- Alerts by SMS and email
- Automatic storage of historical data
- Reliability and data accuracy
- Environmental security, avoiding the risk of overflowing
- Avoidance of additional costs related to urgent replenishments
- Low investment

Remote management of lubricant tanks

ISA's Telemetry Solution for Lubricants is ideal to provide information on the level of lubricant in tanks remotely.

This system enables an automatic alarm transmission when the tank level reaches critical values.

Intelligent Sensing Anywhere

Telemetry Solution for Lubricants

info@isasensing.com
www.isasensing.com

Solution:

- The system collects data from the tanks and sends it by GSM to a central server. This information will be available through the internet.

Application:

- Monitoring of the level of new and used lube in tanks in car repair garages.

- Remote management of lubricant levels
- New services in a cost-effective way
- Quick Return On Investment

Technical Specifications

- GSM/SMS communication
- 230V/ battery power supply
- Non-volatile internal memory
- Fully configurable frequency of communication
- Wireless ultrasonic sensors
- Cabled or wireless pressure sensors

Product in conformity with the ETSI 300386 norms; EN 55022 and EN 61000, according to the requirements of the Directive EMC 89/336/CEE, altered by Directives 92/31/CEE and 93/68/CEE.
